INTRODUCTORY TEXT

SECTION TITLE

DESCRIPTIVE TEXT

```
% create a report like this:
% publish('myscript.m', 'html')
```

BOLD TEXT

```
PREFORMATTED
TEXT
```

That was with two spaces after the percent (%)

An image:

- ITEM1
- ITEM2

1. ITEM1

1. ITEM2

Latex table

End of latex table

$$e^{\pi i} + 1 = 0$$

```
% snapnow;
```

Trying stuff on my own

In star and *under bars* and `vertical bars`

display for output

Perhaps what I really want is a notebook that lets me include output from matlab commands. But notebook is only available on windows

```
% If you put a blank line, it goes back to doing regular matlab comments

% If I want to put text into the output stream, display works, but the
% display is in the resulting code

display('hello world')
display('hello world with ;');
```

```
hello world
hello world with ;
```

sprintf can help

```
val1 = 0.123456789; % ; suppresses putting the result value into the publish outpu
val2 = 3.14 % This will be in the publish

display(sprintf('Values: %0.3f %d %d',val1,val2, 3))

sprintf('Values: %0.3f %d %d',val1,val2, 3)
```

```
val2 =

    3.1400

Values: 0.123 3.140000e+00 3

ans =

Values: 0.123 3.140000e+00 3
```
